

WELCOME TO SESSION 03

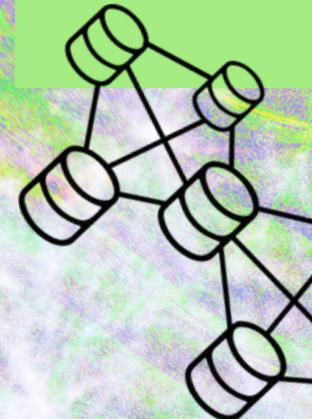

The Evolution of Dweb Art, Activism and History

In the earliest days of any emerging technology, one can count on a handful of artists who choose to utilize said technology as a tool or aspect of medium in their artwork. Despite popular belief, the history of artists working in Dweb does not begin in 2018 or even 2009. As the internet in itself is a decentralized network, artists have been creating artworks that behave within these systems for decades.

Participants will learn why artists have been drawn to making work with and about decentralized networks and who helped to shape the evolving aesthetics and discourse around artwork related to these systems, utilizing everything from peer-to-peer file sharing networks of the late '90s to blockchain. Finally, participants will learn how artists use decentralized tooling for autonomy and why it may or may not have been successful.

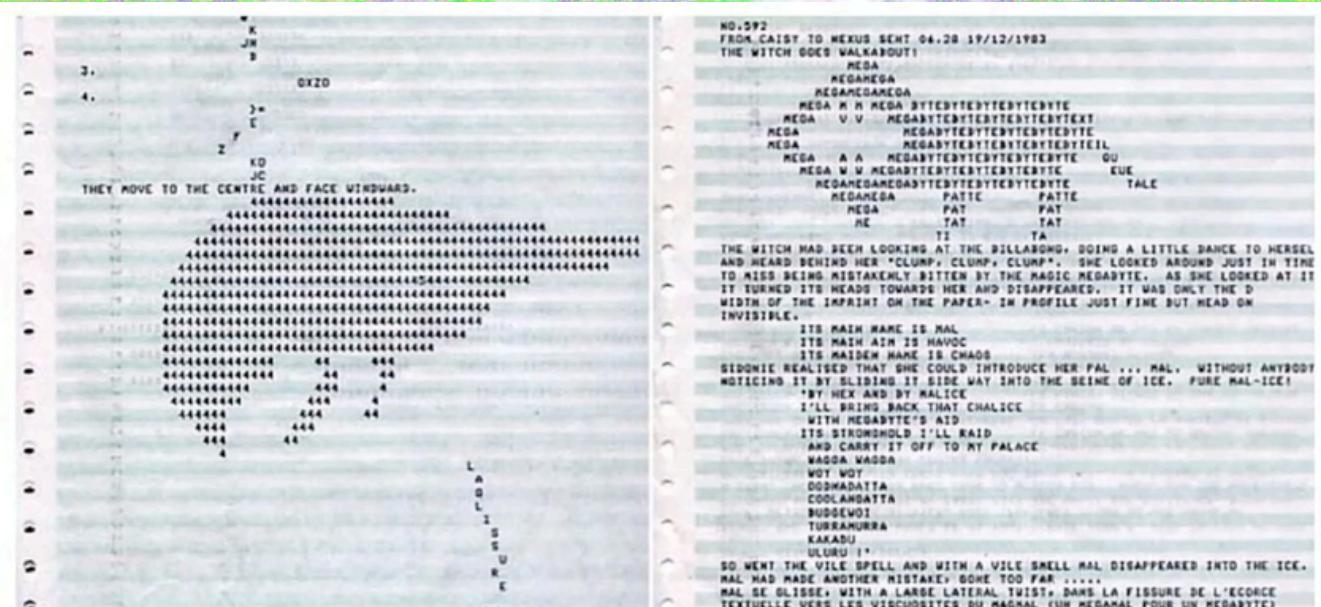

OVERVIEW

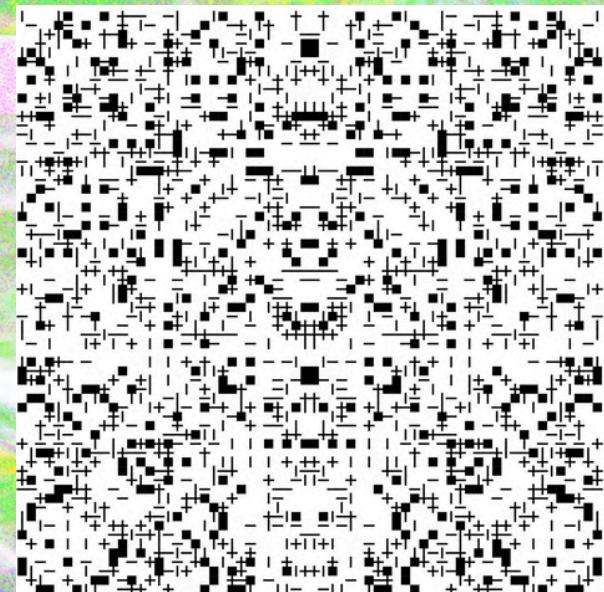

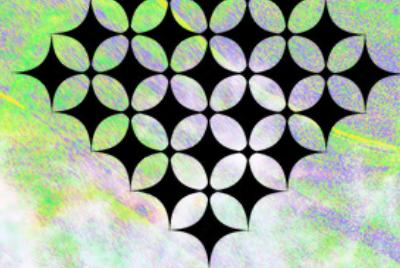

- 04 Icebreaker
- 05 Quick Recap
- 06 Telematic Thinking
- 07 BBS and Art
- 08 Net Art of the 1990s
- 09 Early Dweb art

MAIL ART AND DADA

Mail Art

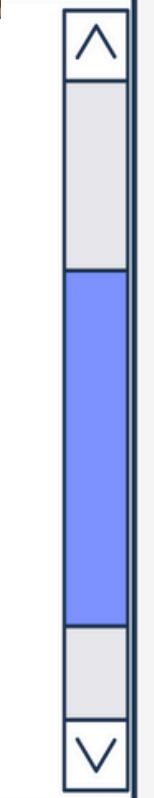

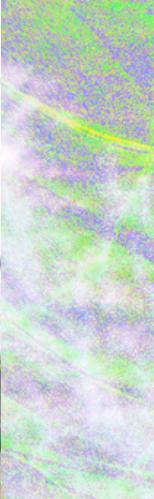

Mail art transformed the postal system into an artistic medium. Artists sent altered postcards or mixed-media pieces on journeys, inviting recipients to add their own creative touch before passing them on, creating a collaborative chain reaction across the globe.

DADAGLOBE

Dadaglobe was a project initiated by Tristan Tzara in 1921, aiming to compile works from Dada artists around the world into a single volume, representing a physical manifestation of the Dada movement's decentralized and global approach. Though it was never realized in Tzara's time, Dadaglobe showcased the movement's commitment to distributing artistic expression across borders, embodying the early 20th-century equivalent of a distributed network by connecting diverse contributions into a collective artistic endeavor.

SEND/RECEIVE

Send/Receive [1977], a project initiated by **Keith Sonnier** and **Liza Bear**, used a public satellite for the first artist-initiated two-way communication between New York and San Francisco. It explored the artistic potential of satellite technology while raising questions about public access to this powerful tool and its potential political and social impact.

ARTBOX/ARTEX

The Planetary Network project, conceived by Roy Ascott for the 1986 Venice Biennale, used the ARTEX computer network to connect artists globally for a collaborative art experience.

PLANETARY NETWORK was a world-wide telecommunications project in the context of LABORATORIO UBIQUA, the Technology and Informatics section of the 42nd Venice Biennale.

For the first 2 weeks of the Biennale, 24 locations around the world contributed to a daily program of exchanges using fax, slow scan TV and computer communications (email and conference). For the rest of the period of the Biennale free user accounts were provided by the I.P.Sharp computer-timesharing network for continuous on-line discussion using ARTEX and Confer.

Network locations:

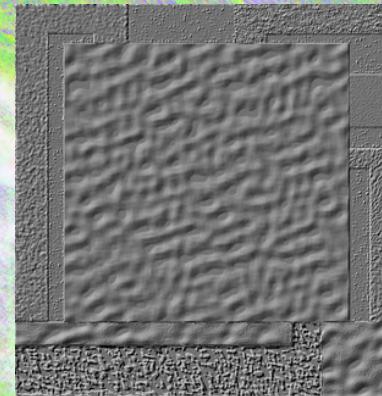

alma, canada / atlanta, u.s.a. / boston, u.s.a. / chicago, u.s.a. / honolulu, u.s.a. / milan, italy / nice, france / paris, france[2] / perth, australia / pittsburgh, u.s.a. / gwent, u.k. / rennes, france / san francisco, u.s.a.[2] / santa monica, u.s.a. / sydney, australia / toronto, canada[3] / vancouver, canada / venice, italy / vienna, austria.

“WHAT MATTERED TO BEUYS WAS THE SOCIAL SCULPTURE, AN ARTISTIC PRODUCTION MADE JOINTLY BY A GROUP OR A COMMUNITY”

-WOLFGANG STAELLE

BACKSPACE/BAKSPC

Established in London in the mid-90s by James Stevens, BACKSPACE was a media lab that leveraged the Internet to distribute and decentralize artworks. As a pioneering platform, it allowed artists to bypass traditional galleries and media outlets, reaching a global audience directly through its online presence. Embracing principles of open access and community collaboration, Backspace fostered a participatory environment where artists, programmers, and creators shared ideas, tools, and resources freely. This not only democratized the production and consumption of art but also supported a DIY and hacker culture, challenging conventional artist-viewer dynamics and encouraging widespread collaborative and educational projects.

The Zapatista FloodNet

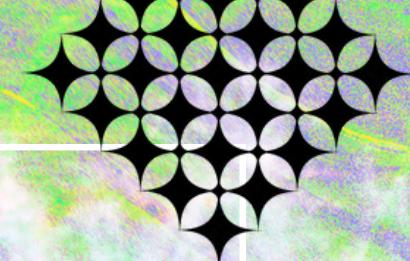

Electronic Disturbance Theatre

Designed as a form of "electronic civil disobedience" in support of the Zapatista movement in Mexico, this piece was intended to be used as a tool for virtual sit-ins and distributed denial of service (DDoS) protests

AGORAXCHANGE

Agoraxchange, a 2004 web-based project commissioned by the Tate Museum, functioned as a distributed online forum. Artists and activists worldwide participated in a collaborative design process, proposing and debating ideas for a global politics game that challenged traditional power structures. While no final game materialized, Agoraxchange's emphasis on user-generated content and decentralized decision-making foreshadowed the rise of similar participatory and critical online art projects.

Decentralized livestreaming platform using WebRTC

The screenshot shows a web browser window for 'thing.tube'. The main content area displays a live video feed of a person sitting at a desk with a laptop, with a green overlay box containing the text 'chrisy is looping'. To the left of the video, a smaller window shows a group video call with four participants. A blue overlay box in the video area contains the text 'you is off'. Below the video, a text message from 'anon-384' reads: 'Is that a cigar in your hand or are you just happy to see me'. On the right, a large black box contains the text 'SARAH'S ARCHIVE: SEASON 1 GOOD PROTOTYPE FEATURING: BHAVIK!' in white. The bottom of the screen features a chat interface with messages from various users like 'anon-384', 'anon-458', 'anon-23', 'peener', and 'chrisy'. The bottom right corner of the screen has buttons for 'chat as reg_ha', 'send', 'home', 'scan rooms', and 'about'.

CRYPTOPUNKS

ERC-721 (THE NFT)

Abstract

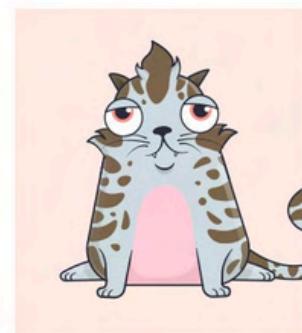

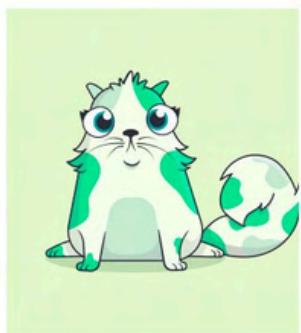

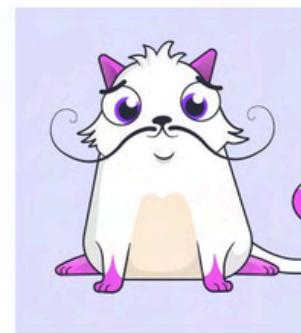

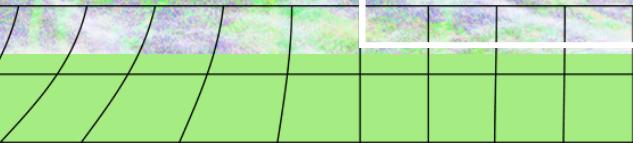

The following standard allows for the implementation of a standard API for NFTs within smart contracts. This standard provides basic functionality to track and transfer NFTs.

We considered use cases of NFTs being owned and transacted by individuals as well as consignment to third party brokers/wallets/auctioneers ("operators"). NFTs can represent ownership over digital or physical assets. We considered a diverse universe of assets, and we know you will dream up many more:

- Physical property — houses, unique artwork
- Virtual collectibles — unique pictures of kittens, collectible cards
- "Negative value" assets — loans, burdens and other responsibilities

In general, all houses are distinct and no two kittens are alike. NFTs are *distinguishable* and you must track the ownership of each one separately.
